

Four Simple Steps to Food Safety

1. Clean:

- Always wash your hands before handling food.
- Sanitize the food thermometer after use.
- Use clean serving plates, utensils, etc.

2. Separate:

- Separate raw meat & poultry from cooked & ready-to-eat foods to avoid contamination.

3. Cook:

- Raw meat & poultry must be cooked to the proper internal temperature (see inside panel).

4. Chill:

- Avoid the Danger Zone (40°F-140°F)
- Store all leftovers in the cooler within 2 hours after cooking. If the outside temperature is above 90°F, store within 1 hour.
- Bring plenty of ice & cold packs to keep your food cold.
- When in Doubt, Throw it Out! Discard leftovers kept in the danger zone for more than 2 hours.

Playing it Safe!

A Food Safety Game Plan for Youth Sporting Events

**Join the
Food Safety
Team!**

**Department of Environmental Health
Food & Housing Division**

The Game Plan

Keep your teams healthy and strong by planning a safe and nutritious meal. When preparing for game day, **be sure to remember:**

Lead your team to a victory with a strong food safety game plan!

Clean Hands:

Be sure the sporting grounds are equipped with adequate hand-washing facilities. And don't forget your soap, paper towels and hand sanitizer!

Clean Utensils:

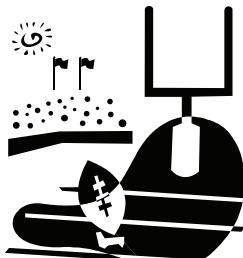

Bring lots of clean utensils, not only for eating but also for preparing and serving.

Food Thermometer:

No pre-game barbecue is complete without an approved food thermometer. So when you pack the grill, pack the thermometer to be sure meats and poultry are cooked thoroughly and reach temperatures high enough to destroy harmful bacteria.

Potable Water:

Does your playing field have drinkable water? Find out ahead of time if clean, drinkable water will be available. If not, bring extra water for drinking, handwashing and cleaning.

Hot Foods

Keep hot food hot. If you stop off at the store and purchase hot food on the way to the game, eat it within 2 hours of purchase. Or plan ahead and chill the food in your refrigerator before packing up for the game. Use an insulated container for foods like soup and chili. To preheat the container, fill it with boiling water and let it stand for a few minutes. Empty it, and then put in the piping hot food. Keep insulated containers closed to keep the food hot (135°F or above) for several hours.

Cold Perishable Food

Carry cold, perishable food, like raw hamburger patties, hot dogs, sausages, lunch meat and chicken, in an insulated cooler packed with several inches of ice, frozen gel packs, or containers of frozen water. When packing the cooler, make sure raw meat and poultry are wrapped securely and stored below ready-to-eat foods to prevent their juices from cross-contaminating other items.

The Play-by-Play

At the field, it's important to keep hot food hot and cold food cold. Bacteria multiply rapidly between 40°F to 140°F, a temperature range known as the *Danger Zone*. Never leave food in the Danger Zone for more than 2 hours. Also, cook meat and poultry completely; partial cooking of food ahead of time allows bacteria to multiply to the point that later cooking cannot destroy. Use a food thermometer to make sure meat and poultry are cooked thoroughly. **Cook hamburgers, sausage, and other ground meats to an internal temperature of 160°F and ground poultry to 165°F.**

The Wrap-Up

Store food in a cooler except for brief times when serving. Cook only the amount of food that will be eaten; this will minimize food waste and avoid the challenge of keeping leftovers at safe temperatures. Discard any leftovers that are not ice cold after the game. Food should not be left out of the cooler or off the grill more than 2 hours. Holding food at temperatures within the Danger Zone is a prime cause of foodborne illness.

Know Your Source

Offer foods from approved sources only and do not bring foods that were cooked or prepared at home. An approved source is one that has been inspected and approved by the Health Department.
